## Software Applications

**Backend Developer, Citrics** - <https://github.com/Kandelonius/citrics-be-c>

- Created tables to be used as the endpoints that the front end could connect to allowing the creation of users and cities
- Connected the Spring back end to the Data Science API allowing users to use personalized search criteria when looking for a city to relocate to

**Frontend Developer, Water My Plants** - <https://github.com/Water-My-Plants-3/front-end>

- Managed redux flow for users allowing a user to create, update and retrieve personal information such as user name and password to be stored on the backend
- Collaborated with the other two Front-end architects to build our login and plant management pages ensuring we had consistent formatting for the backend
