Project

Citrics - Back-end developer > GitHub <   React | Redux | Spring | Flask

A web application that allows users to find a nice area to live based on various criteria such as local crime rate, weather and cost of living.
- Created tables to be used as the endpoints that the front end could connect to
- Connected the Spring back end to the Data Science API

Water-My-Plants Front-end developer > GitHub <   HTML | CSS | React | Redux | Node

A web application where users can manage their plant watering tasks based on the water cycle requirements of the specific plant.
- Managed redux flow for users
- Collaborated with the other two Front-end architects to build our login and plant management pages
